45 Degree Angle Ethernet Cable Assemblies

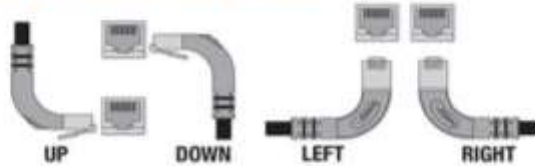

Perfect for High Density Data Center Applications

L-com's unique, patented, 45 degree angle patch cables provide true Category performance at an affordable price. These newly designed angled Ethernet cable assemblies feature a specialized channel separator and load bar to achieve Cat 5e/6 performance while maintaining a smooth 45 degree bend. These industry first cables are perfect for use in data centers or high density patching applications.

We offer Category 5e and Category 6 shielded and unshielded angled cable assemblies in a variety of popular colors. If you can't find the cable you are looking for, call us today for a custom cable quote.

Right Angle Ethernet Cable Assemblies

These Cables Offer True Category Performance

L-com's unique, patented, right angle Ethernet cable assemblies provide true Category 5e and Category 6 performance at an affordable price. These right angle Ethernet cable assemblies feature a specialized channel separator and load bar to achieve high performance and compliance with TIA/EIA-568 standards while maintaining a right angle bend.

These cable assemblies are superior to competitor's right angle cable assemblies. We have tested them and found that our competitor's cables do not meet the requirements for Category 5e/6 TIA/EIA standards.

These industry first right angle Ethernet cables are perfect for use in tight fit applications and dense connectivity applications commonly found in data centers and enclosures.

We offer Category 5e and 6 shielded and unshielded right angle cable assemblies as well as LSZH jacketed versions off the shelf.

If you can't find the cable you are looking for, call us today for a custom cable quote.
